MODEC INTRODUCES NEW SKIN DECONTAMINANTS REGISTERED WITH THE FDA

DENVER, COLORADO (February 12, 2004) Modec, Incorporated announced today the commercial launch of its new antiseptic skin decontamination products now registered with the FDA. The Company's new MDF-120 Skin Decon Kit and MDF-140 Handwash, are based upon the Company's patented technology licensed from the Federal government.

"This is a breakthrough development in the ability of first responders and medical personnel to provide effective decontamination procedures" said Brian J. Kalamanka, President and CEO of Modec. "In addition, this product will help prevent the further absorption and spread of contamination from the person's body, and to prevent the spread to other people, including medical personnel, who must handle or might come in contact with the person who is contaminated."

MDF-120 and 140 have many advantages over existing methodologies according to Modec scientists. These safe and effective products embody the patented technologies developed by counterproliferation programs of the US government as opposed to off-the-shelf soaps and detergents that are not specifically designed for technical decon applications. Modec's Skin Decon products also comply with the Center for Disease Control guidelines for decontamination procedures of chemical and biological warfare agents ([Click here](#) for CDC's website).

Modec's MDF product series are available in several economical product configurations, including individual sized dosing, to meet the requirements of any operation. Modec is an FDA Registered Drug Establishment ([Click here](#) for Registration Document) and produces its product pursuant to FDA Manufacturing (GMP) Standards pursuant to 21 CFR Part 820..

Modec, Inc. is the leading provider of WMD decontamination technologies and apparatus used worldwide. Modec is an authorized licensee of the Sandia Decon Formulation under its license No. 00-C00872 with Sandia, Corp., Albuquerque, New Mexico. Modec has pioneered the research and development of decontamination applications using the patented technologies developed by the US Department of Energy. Modec, Inc. is headquartered in Denver, Colorado and is a privately held organization.
